# MOONNICH®

brands for atmosphere

*For flush ceiling mounting*  
**HEATSCOPE® LIFT – FRAME – BOX**  
*Brand new & really smart!*

What are you doing with your car, when you don't need it? Exactly – you will garage it!  
This is working now with HEATSCOPE® infrared heaters as well...  
**with the new mounting accessories LIFT, BOX & FRAME.**

With this new equipment it is possible to flush mount HEATSCOPE® heaters into a recess in the ceiling.  
When the heater is needed and switched ON, it will drive out of the recess automatically.  
The moment it will not be used anymore, the heater will drive back in the recess – after a short time of cooling down.  
**Very simple & smart!**

The HEATSCOPE® LIFT-System is built up modular – you can choose, in which way you want to design the recess for the heater in the ceiling:

in any way;

– the **core is the so called LIFT lifting system**, which you will need for a flush ceiling installation

– the **FRAME is an optional border blind**, which will cover the visible edge of the recess and which will simulate the rounded foreedge of the heater;

– the **BOX, which is a built in case** can be installed in the recess to cover the whole.

#### Mix it up!

LIFT + BOX or LIFT + FRAME or all together: LIFT + BOX + FRAME. **It's just a matter of aesthetics!**

**Please remember**, that LIFT, FRAME & BOX were developed exclusively for us with HEATSCOPE® heating systems; they will NOT work with other heaters!
